

1. Hello, my name is Neil! I graduated high school a few months ago and am an incoming freshman at De Anza. Located in Roseville (near Sacramento), I attend Sierra College while taking advantage of the Computer and Information Sciences program online here at De Anza/Foothill. I currently major in Computer Science and I'm interested in software engineering and development. My interest stems from competing in FLL and VEX Robotics since elementary school and I loved the inherent problem solving and strategizing in programming. After two years of community college, I plan to transfer to a UC, with my eyes on UC Berkeley in particular.
2. In CIS 22B, my primary objective is to gain familiarity and solidify my foundational skills in the fundamental C++ programming language. For computer science majors, I've repeatedly read that C++ is absolutely essential. So far, my experience with C++ consists of robotics programming with VEX Robotics, of which I have competed at the national level. I have not taken CIS 22A, but I have taken AP Computer Science A (Introduction to Java) and I am taking CIS 35B Advanced Java Programming concurrently.
3. I have reviewed the resources, and I think the free 24/7 tutoring should be more than enough help for me during this course.
4. I have read through the De Anza statement on academic integrity.
